When tissue management is key, reach for Ultrapak knitted displacement cord. Its proprietary knitted design is better than braided or twisted cord for **packing** into the sulcus, **absorbing** fluids, and **expanding** for adequate retraction. As an important part of Ultradent's proven tissue management system, Ultrapak cord ensures maximum control with minimum effort.

Knitted Ultrapak cord (shown at bottom) is composed of thousands of tiny, interlocking loops so it compresses and expands easier than other cords. 100% cotton fibers provide high absorption of hemostatic agents and sulcular fluids.

Ultrapak cord packs effortlessly into the sulcus and then exerts a gentle, continuous outward force as knitted loops seek to open. Optimal tissue displacement occurs in 1–3 minutes.

Ultrapak packing cord does not entangle in burs or packers. The bright color facilitates easy location and removal.

Ultrapak CleanCut design features a blade in the cap for efficient cutting. A redesigned dispensing orifice prevents cord from falling into the bottle.

1 x Each #00, 0, 1, and 2 cord
1 x Ultrapak organizer

Recommended Product Fischer's Ultrapak Packers

Specially designed packers ease the packing of Ultrapak knitted cord. Available with thin, serrated or non-serrated edges, they allow practitioners to place the cord in one circular, sliding motion without lifting the instrument from the cord.

Each bottle contains 8 ft/244 cm of cord.

Ultrapak E is impregnated with racemic epinephrine hydrochloride.
